

***Calophya latiforceps*:**

- Common name: yellow Brazilian peppertree leaf galler
- The leaf galler is native to Brazil.
- The leaf galler will only feed and develop on Brazilian peppertrees.
- Adult leaf galls lay eggs on young stems of Brazilian peppertrees.
- Immature leaf galls form open pit-galls on the surface of young leaves.
- Galls act as a nutrient sink and can reduce the growth of Brazilian peppertree and can cause premature leaf drop.
